

**METHOD OF SENDING MOBILE PHONE SHORT MESSAGE
VIA ELECTRONIC MAIL AND METHOD OF TRANSACTION
BY USING SAME**

ABSTRACT OF THE DISCLOSURE

A method of sending a mobile phone short message via e-mail and a transaction method using same involving a user end which sends e-mail to a conversion mail server via the sender mail server. The e-mail information is converted by the conversion mail server into a short message recipe which is sent to a short message server and then to the receiving end mobile phone. The contents of the e-mail contain a verification stamp information for verifying, managing and cost calculation of the message transmission. The user can send directly the short message in the form of e-mail to the mobile phone user via internet, without the entry of information by means of mobile phone keyboard.
